

GenAI Prompt Engineering Intern

Assessment

Duration

11:00 AM to 4:00 PM (5 Hours)

- Aptitude Test (30 minutes)
- Task 1: Full-Stack Web App Clone (3 hours)
- Task 2: n8n Workflow Automation (1 hour)
- Submission & Buffer Time (30 minutes)

Aptitude Test

A short aptitude test covering:

- Logical reasoning
- Analytical thinking
- Problem solving
- Basic communication and comprehension

Task 1: Full-Stack Web App Clone

Objective:

Build a simplified full-stack clone of Todoist.

Target URL: <https://app.todoist.com/>

Required Features:

- Create, edit, and delete tasks
- Mark tasks as complete/incomplete
- Search and filter tasks
- Responsive design
- Persistent storage using Supabase, Firebase, or any backend service

Allowed Tools

You may use any AI coding tools and technologies, including:

- Cursor
- Claude
- ChatGPT
- GitHub Copilot
- Any framework, language, or database

Task 2: n8n Workflow Automation

Objective:

Build an n8n workflow that:

- Fetches today's news articles from NewsAPI.org
- Extracts title, description, content/body, source, author, published date, and URL
- Stores each article as a separate row in Google Sheets

Deliverables

Task 1 Deliverables:

- Live deployed URL
- GitHub repository
- Prompt history (major prompts and debugging prompts used)
- README with setup instructions and architecture overview

Task 2 Deliverables:

- Exported n8n workflow JSON file
- Google Sheet link containing the fetched news data

Evaluation Criteria

- Aptitude and problem-solving ability
- Functional completeness
- UI/UX quality
- Prompt engineering quality
- Code quality and architecture
- Database design
- Debugging ability
- n8n workflow correctness
- Documentation clarity

Goal

This assessment is designed to evaluate how effectively you can use AI tools to analyze, build, debug, and deliver working software solutions.
